DRISHTI

Quantified Business Impact Estimate

ET Gen AI Hackathon 2025

The Problem We're Solving

India has ~110 million active retail investors (NSE, 2024). The vast majority make investment decisions based on:

- WhatsApp forwards and social media tips
- News headlines without context
- Brokers with inherent conflicts of interest
- Expensive SEBI-registered advisors (Rs.15,000–Rs.50,000/year) they can't afford

> **The result: retail investors consistently underperform the index by 3–7% annually (SEBI Investor Survey 2023).**

Impact Model

Assumption 1 — Addressable Market

Segment	Count	Basis
Active NSE/BSE retail investors	110 million	NSE Annual Report 2024
Digitally active (smartphone + demat)	60 million	CDSL/NSDL data
Willing to use AI investment tools	12 million	20% of digital-active (conservative)
DRISHTI reachable TAM (Year 1)	500,000	4% of AI-willing segment

Impact 1 — Time Saved Per Investor

Current state — Manual research before each trade:

- Reading 3–5 news articles: 25 minutes
- Checking charts manually: 15 minutes
- Looking up fundamentals: 10 minutes
- Comparing with portfolio: 10 minutes
  - Total: ~60 minutes per research session

With DRISHTI:

- Full 4-step analysis: 45–90 seconds
- Time saved per session: ~58 minutes

```
Active investors using DRISHTI:     500,000
Research sessions per month:        8 (2 per week)
Time saved per session:             58 minutes
Total time saved per month:         500,000 x 8 x 58 min
                                  = 232,000,000 minutes
                                  = 3.87 million hours/month

At average Indian knowledge worker rate (Rs.500/hr):
Monthly time value saved:           Rs.1,933 Crore
Annual time value saved:            Rs.23,200 Crore (~$2.8 Billion)
```

Impact 2 — Investment Return Improvement

Conservative estimate: +1.5% annual return improvement vs unassisted retail investor
Assumption: DRISHTI's 4-step analysis helps users avoid 1–2 bad trades per quarter and catch 1 good opportunity they'd have missed.

```
Average retail portfolio size (India):   Rs.3,50,000 (SEBI Survey 2023)
Return improvement:                       +1.5% per year
Gain per investor per year:              Rs.5,250

Active DRISHTI users (Year 1):           500,000
Total incremental wealth created:        500,000 x Rs.5,250
                                        = Rs.2,625 Crore per year

At 500K users  -->  Rs.2,625 Cr additional wealth for Indian retail investors annually
At 5M users    -->  Rs.26,250 Cr additional wealth
```

Impact 3 — Cost Reduction vs Traditional Advisory

Advisory Type	Annual Cost	DRISHTI Equivalent
SEBI RIA (Registered Advisor)	Rs.15,000–Rs.50,000	Rs.0 (Groq free tier covers ~2,000 queries/day)
Premium stock screener (Tickertape Pro)	Rs.4,999/yr	Rs.0
Research reports (Motilal, ICICI Direct)	Rs.10,000–Rs.25,000/yr	Rs.0
Total saved per investor	Rs.25,000–Rs.75,000/yr	Rs.0

```
Users saving advisory costs:     500,000
Average advisory cost saved:     Rs.15,000/year (conservative)
Total cost saved:                500,000 x Rs.15,000 = Rs.7,500 Crore/year
```

Impact 4 — API Cost (Running DRISHTI)

```
Claude Sonnet (4-agent loop):
  Input:  ~2,000 tokens x $3/M  = $0.006
```

```
  Output: ~1,000 tokens x $15/M = $0.015
  Total per deep analysis:        $0.021 (~Rs.1.75)

Groq (intent extraction + fallbacks):
  ~500 tokens x $0.05/M = $0.000025 (~Rs.0.002)

Cost per full analysis:           ~Rs.1.75
Cost per month (8 queries/user):  ~Rs.14/user/month
Cost per year:                    ~Rs.168/user/year

vs. what users currently pay:     Rs.15,000-Rs.75,000/year
Cost reduction ratio:             89x-446x cheaper
```

Impact 5 — Revenue Model (SaaS Path)

```
Freemium tier (Groq only — no Claude):  Free
Pro tier (Claude deep analysis):         Rs.299/month (~$3.60)

Conversion assumption: 5% of users upgrade to Pro

500,000 users x 5% = 25,000 Pro users
Monthly revenue:    25,000 x Rs.299 = Rs.74.75 Lakh
Annual revenue:     Rs.8.97 Crore

At 5M users (3-year target):
Pro users:          250,000
Annual revenue:     Rs.89.7 Crore (~$10.8M ARR)
```

Summary Table

Metric	Value	Basis
Time saved per user/month	7.7 hours	8 sessions x 58 min
Time value saved (500K users)	Rs.23,200 Cr/year	@ Rs.500/hr
Incremental investment returns	Rs.2,625 Cr/year	+1.5% on Rs.3.5L avg portfolio
Advisory cost saved per user	Rs.15,000–Rs.75,000/year	vs SEBI RIA / premium tools
Cost to run per user	Rs.168/year	Claude + Groq API
Cost reduction vs traditional	89x–446x cheaper	
Year 1 revenue potential	Rs.8.97 Crore	5% Pro conversion
3-year revenue potential	Rs.89.7 Crore	5M users, 5% Pro

Key Assumptions & Risks

Assumption	Value	Risk if Wrong
20% of digital investors want AI tools	Conservative	If 10%: halve all numbers
DRISHTI captures 4% of AI-willing TAM	Conservative	Depends on distribution
+1.5% return improvement	Conservative (SEBI shows 3–7% gap)	Hard to attribute causally
8 research sessions/month	Moderate	Power users may do 20+, casual 2–3
5% Pro conversion	Industry SaaS benchmark	Could be lower initially
Claude API pricing stable	Based on current pricing	Anthropic may change pricing

The Real Impact — Beyond Numbers

> **Financial Inclusion:** 76% of Indian retail investors are in Tier-2/3 cities (NSE, 2024). They cannot access Rs.50,000/year advisors. DRISHTI gives them the same quality of analysis — in Hindi, Hinglish, or English — for free.
>
> **Democratization:** The same multi-step analysis that a hedge fund analyst does manually in 2 hours, DRISHTI does in 90 seconds for anyone with a smartphone.
>
> **Behavior Change:** By showing why before showing what (the 4-step DETECT → ENRICH → PERSONALIZE → RECOMMEND workflow), DRISHTI trains investors to think analytically rather than react emotionally to tips.

DRISHTI — "दृष्टि" means Vision in Sanskrit. Because good investing starts with seeing clearly.
