DRISHTI

Impact Model

Quantified Business Impact Estimate

ET Gen AI Hackathon 2025

₹23,200 Cr	₹2,625 Cr	89×–446×	₹89.7 Cr
Time value saved/yr	Wealth created/yr	Cheaper than advisors	3-yr revenue potential

1. The Problem We're Solving

India has approximately 110 million active retail investors (NSE Annual Report 2024). The vast majority make investment decisions based on unreliable, conflicted, or inaccessible information sources.

Information Source	% of Retail Investors	Problem
WhatsApp forwards and social media tips	~65%	No context, no analysis, often manipulated
News headlines without context	~72%	Reactive, not proactive - always late
Brokers with inherent conflicts	~40%	Commission-driven, not returns-driven
SEBI-registered advisors	<3%	₹15,000–₹50,000/year - unaffordable for most

The result: retail investors consistently underperform the index by 3–7% annually (SEBI Investor Survey 2023). On an average portfolio of ₹3,50,000, this represents ₹10,500–₹24,500 of avoidable annual loss per investor.

110M	3–7%	₹3.5L	₹15K–₹75K
Active retail investors	Annual underperformance vs index	Average portfolio size	Annual advisory cost

2. Addressable Market

Segment	Count	Basis
Active NSE/BSE retail investors	110 million	NSE Annual Report 2024
Digitally active (smartphone + demat account)	60 million	CDSL/NSDL demat account data
Willing to use AI investment tools	12 million	20% of digital-active (conservative estimate)
DRISHTI reachable TAM - Year 1	500,000	4% of AI-willing segment
DRISHTI target - Year 3	5,000,000	~42% of AI-willing segment

The 20% AI-willingness rate is conservative - it is consistent with fintech adoption benchmarks in India (Paytm, Zerodha, Groww all saw rapid penetration in this cohort). The 4% Year 1 capture rate assumes organic growth with no paid marketing.

3. Impact 1 - Time Saved Per Investor

~60 min	45–90 sec
Manual research per session	DRISHTI full 4-step analysis

Research Task	Manual Time	With DRISHTI	Time Saved
Reading 3–5 news articles	25 minutes	0 minutes	25 minutes
Checking charts manually	15 minutes	0 minutes	15 minutes
Looking up fundamentals	10 minutes	0 minutes	10 minutes
Comparing with portfolio	10 minutes	~90 seconds	~8.5 minutes
Total per session	~60 minutes	~90 seconds	~58 minutes

Annual Time Value Calculation

```
Active DRISHTI users (Year 1):        500,000
Research sessions per month:          8  (2 per week)
```

```
Time saved per session:                58 minutes
                                       ____________________________
Total time saved per month:            500,000 × 8 × 58
                                     = 232,000,000 minutes
                                     = 3.87 million hours/month

At average Indian knowledge worker rate (₹500/hour):
Monthly time value saved:              ₹1,933 Crore
Annual time value saved:               ₹23,200 Crore  (~$2.8 Billion)
```

₹23,200 Crore / year

Annual Time Value Saved

At ₹500/hr knowledge worker rate × 500,000 users

4. Impact 2 - Investment Return Improvement

DRISHTI's 4-step analysis (signals + technicals + fundamentals + portfolio fit) helps users avoid 1–2 bad trades per quarter and identify 1 opportunity they would have missed. Conservative estimate: +1.5% annual return improvement versus unassisted retail investor.

This is deliberately conservative - SEBI's own survey shows a 3–7% underperformance gap. Even closing 20–25% of that gap represents a significant improvement.

Incremental Wealth Creation Calculation

```
Average retail portfolio size (SEBI Survey 2023):   ₹3,50,000
Conservative return improvement:                    +1.5% per year
Incremental gain per investor per year:             ₹5,250
                                                    _________________
Year 1 - 500,000 DRISHTI users:
  Total incremental wealth created:                 ₹2,625 Crore/year

Year 3 - 5,000,000 DRISHTI users:
  Total incremental wealth created:                 ₹26,250 Crore/year
```

₹2,625 Cr	₹26,250 Cr
Year 1 - 500K users	Year 3 - 5M users

5. Impact 3 - Cost Reduction vs Traditional Advisory

Advisory / Tool Type	Annual Cost	DRISHTI Equivalent
SEBI Registered Investment Advisor (RIA)	₹15,000–₹50,000	₹0 (Groq free tier covers ~2,000 queries/day)
Premium stock screener (Tickertape Pro)	₹4,999/year	₹0 (included in free tier)
Institutional research reports (Motilal, ICICI Direct)	₹10,000–₹25,000/year	₹0 (AI synthesis on demand)
Total cost per investor per year	₹25,000–₹75,000	₹0 (free tier) / ₹3,588 (Pro tier)

Total Advisory Cost Saved

```
Users saving advisory costs (Year 1):      500,000
Conservative advisory cost saved/user:     ₹15,000/year
                                           ________________________

Total advisory cost saved per year:        ₹7,500 Crore

Note: ₹15,000 is the floor estimate (cheapest SEBI RIA tier).
Real savings for premium research users:   ₹50,000-₹75,000/year.
```

₹7,500 Crore / year

Advisory Cost Saved Across User Base

Conservative - using floor SEBI RIA pricing of ₹15,000/year

6. Impact 4 - Cost to Run DRISHTI

The cost-efficient multi-model routing architecture (Groq for fast tasks, Claude for deep reasoning) makes DRISHTI dramatically cheaper to operate than a Claude-only system - and orders of magnitude cheaper than traditional advisory services.

Per-Analysis Cost Breakdown

```
Claude Sonnet - 4-agent analysis loop:
  Input:  ~2,000 tokens × $3/M tokens   = $0.006
  Output: ~1,000 tokens × $15/M tokens  = $0.015
  Total per deep analysis:               $0.021   (~₹1.75)
```

```
Groq - intent extraction + sentiment + fallbacks:
  ~500 tokens × $0.05/M tokens          = $0.000025  (~₹0.002)
                                         ____________________

Cost per full 4-agent analysis:           ~₹1.75
Cost per user per month (8 queries):      ~₹14
Cost per user per year:                   ~₹168

vs. what users currently pay:             ₹15,000–₹75,000/year
Cost reduction ratio:                     89×–446× cheaper
```

₹1.75	₹168	89×	446×
Per full analysis	Per user/year	Min cost reduction	Max cost reduction

7. Revenue Model - SaaS Path

Tier	Features	Price	Target Segment
Free (Groq only)	12 signals, chart patterns, Hinglish UI, portfolio tracker, video engine	₹0/month	Mass market - first 10M users
Pro (Claude deep analysis)	All free features + 4-agent Claude analysis, full Nivesh Score, portfolio health scoring, priority signals	₹299/month	Active traders, serious investors
Enterprise (API access)	White-label API for brokers, mutual fund platforms, financial media	Custom pricing	ET Markets, Zerodha, Groww, etc.

Revenue Projections

```
Year 1 - 500,000 users, 5% Pro conversion:
  Pro users:           25,000
  Monthly revenue:     25,000 × ₹299  = ₹74.75 Lakh
  Annual revenue:                       ₹8.97 Crore

Year 3 - 5,000,000 users, 5% Pro conversion:
  Pro users:           250,000
  Monthly revenue:     250,000 × ₹299 = ₹7.475 Crore
  Annual revenue:                       ₹89.7 Crore  (~$10.8M ARR)

Enterprise (Year 2+):
  3 broker/platform integrations × ₹50L/year = ₹1.5 Crore
  Total Year 3 revenue:                        ~₹91.2 Crore
```

₹8.97 Cr	₹89.7 Cr
Year 1 ARR	Year 3 ARR (~$10.8M)

8. Impact Summary

Metric	Value	Basis
Time saved per user per month	7.7 hours	8 sessions × 58 minutes
Annual time value saved (500K users)	₹23,200 Crore/year	@ ₹500/hr knowledge worker rate
Incremental investment returns (500K users)	₹2,625 Crore/year	+1.5% on ₹3.5L average portfolio
Advisory cost saved per user	₹15,000–₹75,000/year	vs. SEBI RIA / premium tools
Total advisory cost saved (500K users)	₹7,500 Crore/year	Conservative ₹15K floor estimate
Cost to run DRISHTI per user	₹168/year	Claude Sonnet + Groq API pricing
Cost reduction vs traditional advisory	89×–446× cheaper	₹168 vs ₹15,000–₹75,000/year
Year 1 revenue potential	₹8.97 Crore	5% Pro conversion at ₹299/month
Year 3 revenue potential	₹89.7 Crore	5M users, 5% Pro, ₹299/month

9. The Real Impact - Beyond Numbers

Financial Inclusion for Bharat

76% of Indian retail investors are in Tier-2 and Tier-3 cities (NSE, 2024). They cannot access ₹50,000/year advisors or institutional research. DRISHTI gives them the same quality of analysis - in Hindi, Hinglish, or English - for free. The language toggle is not a feature; it is a statement about who this product is for.

Democratisation of Institutional Intelligence

The same multi-step analysis that a hedge fund analyst does manually in 2 hours - reading filings, checking technicals, reviewing fundamentals, cross-referencing the portfolio - DRISHTI completes in 90 seconds for anyone with a smartphone. This is not incremental improvement; it is a structural shift in information access.

Behaviour Change Through Transparency

By showing WHY before showing WHAT - the visible 4-step DETECT → ENRICH → PERSONALISE → RECOMMEND pipeline - DRISHTI trains investors to think analytically rather than react emotionally to tips. Users see exactly which data points drove the recommendation. This builds financial literacy, not dependency.

Closing the Information Gap

Most retail investors find out about management guidance cuts or SEBI circulars days later - via news, or worse, after their broker mentions it. DRISHTI's Management Commentary signal monitors earnings call language in real time across top Nifty 50 stocks. The SEBI Regulatory Alert fetches circulars as they are published. Institutional participants have dedicated research teams watching these same signals daily. Now retail investors do too.

10. Key Assumptions & Risks

Assumption	Value Used	Risk if Wrong	Mitigation
20% of digital investors want AI tools	Conservative	If 10%: halve all user numbers	Supported by Zerodha/Groww adoption curves
DRISHTI captures 4% of AI-willing TAM	Conservative	Depends on distribution & marketing	ET Markets partnership = built-in distribution
+1.5% return improvement	Conservative (SEBI shows 3–7% gap)	Hard to attribute causally	SEBI's own data validates the 3–7% gap exists
8 research sessions per month	Moderate estimate	Power users: 20+; casual: 2–3	Model works at both extremes
5% Pro conversion	Industry SaaS benchmark	Could be lower initially	Freemium creates large base for conversion
Claude API pricing stable	Current March 2026 pricing	Anthropic may change pricing	Groq fallback reduces Claude dependency
₹500/hr knowledge worker rate	Conservative	Could be higher in metros	Even at ₹200/hr: ₹9,280 Cr time value saved

The Bottom Line

DRISHTI does not compete with existing stock screeners.

It replaces a ₹50,000/year advisor with a ₹168/year AI - for the investor who never had an advisor at all.

"Aapka Personal Hedge Fund AI" *IN*
